I. Introduction

The Strada at Mercato Hurricane Preparedness Guide is a compilation of advice from experts such as the National Hurricane Center, American Red Cross, and Emergency Management Offices.

The purpose of the Hurricane Preparedness Guide is to have a written procedure for the Strada Staff and Owners, which can be implemented in the event a hurricane is threatening the Collier County area and implemented immediately in the event a disaster strikes the area. A guide will save valuable time in making decisions and preparations for an impending disaster and in the repair process afterwards. All Strada Employees will be able to react in a positive and expedient manner by knowing the total process involved in the preparedness and recovery effort.

Guidelines for Owners' preparation for hurricane season are also included in this Guide. The Owner guidelines can also be found on the website, www.thestradaatmercato.com

Hurricane Season

June 1st - November 30th

Hurricane Watch

A hurricane watch means that hurricane conditions (sustained winds of 74 mph or higher) are possible within a specified area. A hurricane watch is issued 48 hours in advance of the anticipated onset of tropical-storm-force winds in an area. Preparations should begin to cope with storm impacts and possible evacuation.

Hurricane Warning

A hurricane warning means that hurricane conditions are expected and will most likely occur. Hurricane warnings indicate that hurricane conditions (sustained winds of 74 mph or higher) are expected somewhere within the specified area. A hurricane warning is issued 36 hours before tropical-storm-force winds are expected.

Category 1 Hurricane

Winds of 74 to 95 mph. Very dangerous winds will produce some damage: Well-constructed frame homes could have damage to roof, shingles, vinyl siding and gutters. Large branches of trees will snap, and shallowly rooted trees may be toppled. Extensive damage to power lines and poles likely will result in power outages that could last a few to several days. Low-lying escape routes located inland could be cut off by rising water several hours before the arrival of the storm. Damage anticipated is minimal.

Category 2 Hurricane

Winds of 96 to 110 mph. Extremely dangerous winds will cause extensive damage: Well-constructed frame homes could sustain major roof and siding damage. Many shallowly rooted trees will be snapped or uprooted and block numerous roads. Near-total power loss is expected with outages that could last from several days to weeks. Low-lying escape routes located inland could be cut off by rising water several hours before the storm arrives; mobile homes expected to be destroyed; some structural damage to small buildings; serious coastal flooding. Damage anticipated is moderate.

Category 3 Hurricane

Winds of 111 to 129 mph. Devastating damage will occur: Well-built framed homes may incur major damage or removal of roof decking and gable ends. Many trees will be snapped or uprooted, blocking numerous roads. Electricity and water will be unavailable for several days to weeks after the storm passes. Low-lying escape routes located inland could be cut off several hours before the center of the hurricane arrives; mobile homes destroyed; some structural damage to small buildings; serious coastal flooding. Damage anticipated is extensive.

Category 4 Hurricane

Winds of 130 to 156 mph. Catastrophic damage will occur: Well-built framed homes can sustain severe damage with loss of most of the roof structure and/or some exterior walls. Most trees will be snapped or uprooted, and power poles downed. Fallen trees and power poles will isolate residential areas. Power outages will last weeks to possibly months. Most of the area will be uninhabitable for weeks or months. Category 4 hurricanes can produce a storm surge of 10 to 15 feet high that can push far inland, many times destroying everything along the coast and flooding low-lying areas well ashore. Major damage to lower floors of buildings adjacent to shorelines due to wave battering and flooding. Collapse of roofs of many small residences. Damage anticipated is extreme.

Category 5 Hurricane

Winds greater than 157. Catastrophic damage will occur: A high percentage of framed homes will be destroyed, with total roof failure and wall collapse. Fallen trees and power poles will isolate residential areas. Power outages will last for weeks to possibly months. Most of the area will be uninhabitable for weeks or months. Category 5 hurricanes can produce a storm surge 20 to 25 feet high that can push miles inland, often destroying everything along the coast and flooding low-lying areas well ashore. Damage anticipated is catastrophic.

Storm Surge vs. Storm Tide

A storm surge is the abnormal rise in seawater level during a storm, measured as the height of the water above the normal predicted astronomical tide. Storm surge is caused primarily by a storm's winds pushing water onshore. A storm tide, which is defined as the water level rise due to the combination of storm surge and the astronomical tide. This rise in water level can cause extreme flooding in coastal areas particularly when storm surge coincides with normal high tide, resulting in storm tides reaching up to 20 feet or more in some cases.

II. OUR FOCUS AND COLLIER COUNTIES ALL HAZARDS GUIDE

Collier County Bureau of Emergency Services partners with the Federal Emergency Management Agency, and the National Hurricane Center in providing the Collier County *All Hazards Guide*. It is available at Collier County Emergency Services website (www.collierem.org), and the association website www.thestradaatmercato.com, (resources-media library-emergency guidelines).

While some of the content found in this guide was cherry-picked from Collier Counties *All Hazards Guide*, **the focus on this Guide is Owner Preparedness for The Strada more specifically.** If you intend on being in residence during hurricane season, or for more information regarding local emergency contact information, sheltering map, evacuation routes, special needs/disabilities resources, resources for pets, storm surge risk map, etc. please refer to the Collier County *All Hazards Guide*.

III. SEASONAL AND FULL TIME RESIDENT PREPAREDNESS –BEFORE HURRICANE SEASON

Hurricane preparation steps vary for Seasonal Residents, or those who do not expect to be in residence during a major storm, and those Full Time Residents who make The Strada their primary residence and are to be on site from June 1st through November 30th (Florida's Hurricane Season).

Whether you consider yourself a Seasonal or Full Time Resident, there are a few steps **EVERYONE** should take in order to prepare for Hurricane Season:

- a. If leaving for more than a few days, complete the Owner Departure Checklist (**see Appendix A**)
- b. Ensure you receive emails and urgent text messages from the association.
- c. Register for Alert Collier to receive emergency communications from Collier County (www.collierem.org).
<https://www.colliercountyfl.gov/?navid=8327>
- d. Complete and submit an Evacuation and Assistance form for anyone who; (1) may be occupying your unit during hurricane season and (2) that may potentially need assistance in evacuating the building (**see Appendix B**).

- e. Know what you, as an owner, are responsible for as well as what the association and management team are responsible for during Hurricane Season (**see Appendix C**)
- f. **ALWAYS** keep the management office informed of who is in residence and when.

Communication is Key. Take special note of items “B” and “C” above. Know that in preparation for a hurricane, during and after, essential communication with owners is required. The GM will be communicating via E-Blasts, property postings, and website updates.

If you are a Seasonal Resident and do not anticipate anyone occupying your unit from June 1st through November 30th, simply ensure you take care of the items above and you are done. **If you are Full Time or anticipate that someone may be occupying your unit during hurricane season, please read on.**

Pre-Hurricane Season Planning

At least 30 days prior to the beginning of hurricane season (June 1st), it is imperative that every employee and owner prepare a hurricane plan for their entire household - an outline that specifies what every member of the household will do before, during and after a hurricane. General guidelines for preparing your hurricane plan are as follows:

- **Know Your Zone:** The Strada is located in Evacuation Zone B. Additional map information can be found at (www.collierem.org)
- **Put Together an Emergency Kit:** (see Appendix D)
- **Write or Review Your Family Emergency Plan:** Prior to any emergency, create a plan of action and determine with family and/or close friends how you will contact each other, where you will go and what your plan of action is for any storm. The Florida Department of Health, in coordination with county health departments and county emergency management agencies, has developed a registry for people with special needs to register to receive assistance during a disaster. For additional information on this service please visit: <https://www.colliercountyfl.gov/government/county-manager-operations/divisions/emergency-management/special-needs-program>

Keep a copy of this plan in your emergency supply kit or another safe place you can access in the event of a disaster. Share your list!

- **Review Your Insurance Policies:** Review your insurance policies to ensure you have adequate coverage for your home and personal property.
- **Vehicle Storage:** Determine in advance if you need to relocate your vehicle.
- **Plan on taking care of yourself without electricity.** Remember that the person taking care of you and your electrical devices may not be available right before and directly after the storm. If you are not able to do so, make other arrangements beforehand.
- If you are elderly, frail, or a person with disabilities and have friends or relatives that can help you with your housing and welfare, contact them now so that they can include your needs as part of their hurricane planning.
- Make a list of prescribed medications and get a month's supply. You should also make copies of the prescriptions. If you normally require a special diet, make sure you take along three days' supply of it in containers that will be easy to open.

IV. SHOULD I STAY OR SHOULD I GO?

Scenario: You find yourself with family in residence and there is an approaching storm. Forecasts indicate that it has good potential to develop into a hurricane and is likely to impact SW Florida. When considering whether to stay or go, please consider the following:

- **Evacuate While You Can** - Should the forecast significantly worsen, there will be a mandatory evacuation ordered. By this time the shelters, hotels, highways, etc. will be overcrowded making evacuation extremely difficult if not impossible. Please listen to the local authorities- if you are in a mandatory evacuation zone- Please leave immediately.
- **Nobody Wishes to Be a Burden** - Despite the best of intentions, residents on site during a major storm create a liability for the association and a burden for the management team. Please consider that preparing for a storm is a tremendous task and staff have property and family to tend to also.
- **Your Safety** - During storms emergency services are suspended until it is deemed safe for first responders. Management team members will be with their families and will not return to work until it is deemed safe to do so. In the event of a health emergency etc., you'd be on your own.
- **It May Become Extremely Uncomfortable** - Depending on the storm's track and intensity, all amenities, common areas, elevators, domestic water pumps, and ingress and egress which may constitute a threat from wind/water damage (garage doors, lobby doors, etc.), will be shut down and closed. These shutdowns may occur well before the storm arrives and may last for an extended period of time after it passes. Power outages are also very common both before, during, and after major storms. Imagine that there are no elevators, no water, no power, no AC, and no access to amenities or common areas.

Failure to leave early...(1) may result in your inability to do so later, (2) presents a liability to the association and a potential burden to the staff, (3) endangers your safety, and (4) may put you in an extremely uncomfortable situation. **PLEASE CONSIDER HAVING AN EXIT STRATEGY TO LEAVE QUICKLY AT THE FIRST INDICATION OF A THREAT TO THE AREA BY AN APPROACHING STORM.**

V. IF YOU DECIDED TO STAY...

1. All residents will receive notifications via E-Blast regarding the timing of elevator and domestic water pump shutdowns etc. as early as possible.
2. Elevators may be shut down as early as twelve (12) to eighteen (18) hours prior to a storm making landfall. This is a critical step in lessening the chance of significant storm damage and will help ensure the elevators operate properly post storm. Elevators will be placed back online as quickly as possible post-storm.
3. The domestic water pumps may be shut down as early as twelve (12) to eighteen (18) hours prior to a storm making landfall and will result in most of the units having no water. Again, this is a critical step to ensure the pumps operate properly post storm. The water pumps will be placed back online as quickly as possible post-storm.
4. You should expect and prepare for no air conditioning for an extended period of time.
5. Many pedestrian doors and garage doors may be secured to prevent potential storm damage.
6. During a storm, management team members will be with their families and unable to respond. Collier County and State Emergency Services will be suspended until it is deemed safe for first responders.

Steps for Those in Residence with Storm Approaching

- Reconsider leaving.
- Review your copy of the Collier County *All Hazards Guide*.
- Complete all applicable steps as listed in Section III of this Guide.
- Know what you, as an owner, are responsible for as well as what the association and management team are responsible for during Hurricane Season (**see Appendix C**).
- Prepare an emergency supply kit (**see Appendix D**).
- Monitor what local officials are advising on radio or TV bulletins (**see Appendix G for local radio and news stations**).
- Follow Hurricane Watch and Warning Procedures when applicable (**see Appendix E**).

VI. EVACUATION ORDERED (www.colliercountyfl.gov)

- An evacuation is ordered because life threatening conditions are present, or will be present, in the area designated as a "mandatory evacuation zone".
- The Board of County Commissioners will determine the mandatory evacuation zone based on the characteristics of each storm.
- For a tropical cyclone event, we should "Run from Water and Hide from Wind". So, if you're threatened by the storm's surge you should go to a safe location before the threat arrives.
- If a mandatory evacuation order is given, in addition to communicating where lives are threatened, government is also communicating where emergency services (police, fire and emergency medical) will cease until the threat no longer exists.
- If you're in a mandatory evacuation zone, officials may go door-to-door advising you of an evacuation order, but they will not force you out of your unit. Remember, your decision to remain in a mandatory evacuation zone is "YOURS".
- How far should you go if your plan dictates you need to evacuate? We evacuate to get out of harm's way - the water threat. Therefore, for most of our tropical events, you only needed to go inland (to the inland side of I-75) within Collier County. Naturally, you can go further away, but remember for every 24 hours ahead of the storm, the storm may deviate 75 miles from the projected track. So, if you choose to go outside the county, don't consider going to another coastline vulnerable to storm surge should the storm's track change.
- Steps for Evacuation:
 1. Follow hurricane evacuation procedures for unit owners (**see Appendix F**)
 2. Be familiar with evacuation routes and shelters.
 3. Be familiar with available local animal friendly shelters.
 4. Be familiar with emergency phone numbers, including roadside assistance.

APPENDIX A

Owner Departure Checklist

2024

1. ☐ Advise the office of your planned departure and return dates.
2. ☐ Stop/forward your mail, place season hold on newspapers, cable, internet & phone. Contact the office with newspaper hold dates.
3. ☐ Leave a spare set of keys to your vehicle (if it is left in the garage) with the Management Office. Hire a Vehicle Watch professional & access permission with the office. Someone other than staff will need to move your vehicle should a storm threaten our location.
4. ☐ Ensure your contact information is up to date, to ensure you will receive emergency emails & notices.
5. ☐ Clean out the refrigerator AND freezer of all items that would not keep for extended period of no electricity; place baking soda in refrigerator. Set to a warmer setting.
6. ☐ Turn off ice maker (life ice maker arm), and empty ice trays/bins in the kitchen and wet bar.
7. ☐ Unplug all electronic devices (i.e., televisions, computers, printers).
8. ☐ Ensure water & water heater to unit is shut off (management team may assist you with this).
9. ☐ Air Conditioning must be kept on in your absence. Set thermostat & humidistat according to the manufacturers/HVAC contractors' directions. Recommended settings if not available AC-75 degrees, humidistat 50. Put fresh batteries in the thermostat.
10. ☐ Turn off the circuit breaker for the hot water heater, advise office for staff to ensure valve is closed.
11. ☐ Empty all trash containers & wash containers.
12. ☐ Bring in any furniture, plantings, décor from your lanai. Close hurricane shutters & leave remotes for electronic shutters on your kitchen counter.
13. ☐ Close and lock all sliding glass doors and windows.
14. ☐ Review storage areas and closets (remove combustibles & keep area clear).
15. ☐ Replace batteries in unit smoke detectors, shutter remotes, thermostats. Remove batteries from TV remotes, flashlights etc.
16. ☐ It is recommended you place bicycles into your unit to prevent corrosion from salt air & humidity.

APPENDIX B

Evacuation Assistance Form

TO: All Owners, Residents and Guests at The Strada at Mercato
FROM: Joyce Sissum, General Manager
SUBJECT: Hurricane Evacuation Assistance Form

Hurricane season in Florida is a six-month long period from June 1st to November 30th each year. Please complete and submit this form and include anyone who; (1) may be occupying your unit during hurricane season and (2) that may potentially need assistance in evacuating the building. The information provided on this form may be shared with Collier County Emergency Services.

Notes for those who may be in residence during an approaching hurricane:

1. Elevators may be shut down as early as 12-18 hours prior to a storm making landfall. This is a critical step in lessening the chance of significant storm damage and will help to ensure the elevators operate properly post-storm. Elevators will be put back online as quickly as possible post-storm.
2. The domestic water pumps may be shut down as early as 12-18 hours prior to a storm making landfall and will result in most of the units having no water. This is a critical step in lessening the chance of significant storm damage and will help to ensure the domestic water pumps operate properly post-storm. The water pumps will be put back online as quickly as possible post-storm.
3. You should expect and prepare for no air conditioning for an extended period of time.
4. Many pedestrian doors and all garage doors may be secured to prevent potential storm damage.
5. During the storm, management team members will be with their families and unable to respond and Collier County Emergency Services will be suspended until it is deemed safe for first responders.

- ☐ We/I do not need any assistance in evacuating the building via the stairway.
- ☐ We/I can make my/our own way to the nearest stairway but will require assistance to descend.
- ☐ We/I cannot make my/our way to the stairway and will remain in my/our unit until assistance arrives.

APPENDIX C

Hurricane Season Responsibilities in Condominiums

It is strongly recommended to be prepared to evacuate prior to a major storm impacting the area. Leading up to, during, and post-storm management's first and foremost priority is the protection of the association's common property. Owners who decide to stay should not expect individual assistance from the management team as they will be occupied preparing and securing the association property as well as tending to their own property and family. Collier County Emergency Services will be suspended until it is deemed safe for first responders. **If staying, expect and plan for no elevators, no water, no air conditioning, and no individual assistance/services for an extended period of time.**

	Owner	Mgmt.
Contract for Home Watch/Vehicle Watch Service.	X	
Bring in balcony furniture, plantings, décor, & secure ceiling fan etc. if no shutters.	X	
Ensure all doors and shutters are secured and locked.	X	
Ensure water & water heater to unit are turned off.	X	X
Ensure enrollment in email communications from (1) association and (2) automated weather alerts from "Alert Collier" system.	X	
Provide names of anyone you wish for management to provide unit access (release unit key).	X	
For any vehicle left on site, leave keys with management office (owner or home watch responsibility to move vehicle).	X	
Move vehicle(s) from garage.	X	
Complete an Evacuation Assistance Form (if applicable).	X	
If staying...prepare a Hurricane Emergency Supply Kit (To include 3-day supply of water and non-perishable food, see "All Hazards Guide")	X	
If leaving...ensure the "Owner Departure Checklist" is completed	X	
Communicate to owners before and after the storm		X
Prepare & secure all common amenities (Fitness room, social room, pool, etc.).		X
Prepare & secure all common property (Generator, roof, garage, elevators, CPU's, etc.).		X
Prepare and secure all common ingress and egress (All doors, shutters, etc.).		X
Prepare and secure all insurance-related materials & record common property		X
Prepare and secure all digital records		X

APPENDIX D

Emergency Supply Kit

- ☐ **Water** - at least 1 gallon daily per person for 3 to 7 days
- ☐ **Food - at least enough for 3 to 7 days**
 - non-perishable packaged or canned food/juices
 - foods for infants or the elderly
 - non-electric can opener
 - paper plates/plastic utensils
- ☐ **Blankets / Pillows, etc.**
- ☐ **Clothing** - seasonal / rain gear/ sturdy shoes
- ☐ **First Aid Kit / Medicines / Prescription Drugs**
- ☐ **Special Items** - for babies and the elderly
- ☐ **Toiletries / Hygiene items / Moisture wipes**
- ☐ **Flashlight / Batteries**
- ☐ **Radio** - Battery operated and NOAA weather radio
- ☐ **Telephones** - Fully charged cell phone with extra battery and a traditional (not cordless) telephone set
- ☐ **Cash (with some small bills) and Credit Cards** - Banks and ATMs may not be available for extended periods
- ☐ **Keys**
- ☐ **Toys, Books, and Games**
- ☐ **Important documents** - in a waterproof container or watertight resealable plastic bag
 - insurance, medical records, bank account numbers, Social Security card, etc.
- ☐ **Tools** - keep a set with you during the storm
- ☐ **Vehicle fuel tanks filled**

APPENDIX E

Hurricane Watch & Warning Procedures

Hurricane Watch Procedures for Unit Owners

- ☐ Monitor what local officials are advising on radio or TV bulletins.
- ☐ Fill your car with gas.
- ☐ Stock up on canned goods, a manual can opener, and prescription medications.
- ☐ Check batteries in radios and flashlights.
- ☐ Secure loose items on lanais and protect windows with shutters.
- ☐ If you have shutters, make sure they are fastened securely, either open or closed.
- ☐ Have flashlights handy.
- ☐ Fully stock your first-aid kit with bandages, adhesive tape, anti-bacterial creams, scissors, iodine, aspirin, and other necessary medications.
- ☐ Ensure emergency supply kit is 100% stocked (**see Appendix E for emergency supply kit**).

Hurricane Warning Procedures for Unit Owners:

- ☐ Follow evacuation instructions from local officials.
- ☐ Leave low areas that might be affected by storm surge flooding.
- ☐ Fill containers, including your bathtubs, with water.
- ☐ Turn the refrigerator and freezer to maximum cold and open the door only when necessary.
- ☐ Be alert for tornadoes, which often accompany hurricanes.

APPENDIX F

Hurricane Evacuation Procedures for Unit Owners

- ☐ Travel as early as possible, preferably in daylight.
- ☐ Be sure you are going to a location that can accommodate your family.
- ☐ Do not travel further than necessary.
- ☐ Close all interior doors.
- ☐ Lock all windows and doors, close all hurricane shutters if you have them.
- ☐ Do everything you can to protect your property from damage, loss, or vandalism.
- ☐ Carry survival supplies (i.e., first aid kit, canned provisions with manual can opener and utensils, bottled water for three days, medications, eyeglasses, hearing aid, and batteries.
- ☐ Carry Cash
- ☐ Always keep important documents with you, including driver's license, passport, legal papers, Medic-Alert, or device to explain special medical needs, insurance policies, and a household inventory in a plastic bag.
- ☐ Take warm and protective clothing if you go up north or to a shelter.
- ☐ Long before a hurricane threatens, seek professional advice for the proper storm preparation for your collections and fine art, using correct procedures and materials for packing, moving, and/or storage.

APPENDIX G

Collier County Emergency Information (from *All Hazards Guide*)

SHELTERING & EVACUATION POLICY

Collier County continues to promote the strategy to “Run from the Water – Hide from the Wind” in evacuation decision-making. We evacuate those at risk from storm surge or fresh water flooding, which causes the greatest loss of life. The areas that are at risk vary because of the storm's track and intensity. Residents that live in mobile or manufactured homes, as well as live-aboard boaters, will be ordered to evacuate in all hurricane events.

The options available are few:

1. Remain at home if your residence is wind-worthy. If you elect to remain, the best place is in a walk-in closet, bathroom or inner hallway away from any windows.
2. Go to a local hotel/motel or stay with friends or relatives out of the evacuation area.
3. Leave the County; for land-falling storms that would approach from the west or southwest, the quickest way to relative safety would be via Alligator Alley (I-75) to the Florida east coast.
4. As a last resort, shelters will be opened from the list below depending on the threat. Stay tuned to local radio & TV for the list of shelters to be opened and the time of opening. Shelters will generally open concurrent with evacuation orders. If you do not have a personal means of transportation, using the established routes & stops, the Collier Area Transit (CAT) mass transportation system will transport people to shelters. For those who live in an area not serviced by the CAT, call the local fire station. The local fire chief will establish a pick-up route and timing for his/her area.

SANDBAGGING & FLOODING EVENTS

Collier County **DOES NOT** issue sand and sandbags to the public. These items are readily available at do-it-yourself (DIY) type stores. Should you feel that you need some sort of rising-water barrier, Emergency Management staff recommends you consider using bags of topsoil that are readily available at the DIY stores. Then, following the event you can spread the soil around your property.
